

Technology and Sustainable Landscape Design

One Day Conference

On 3rd March 2017 (Friday)

Venue:

Furama Riverfront Hotel
405, Havelock Road, Singapore

Program

Greening the Urban Environment

Background!

As technological development continues to progress at an unprecedented rate, it is becoming more and more exciting to witness what new developments are next to emerge. In the world of landscape architecture, technology is always developing for the convenience of the designer and, more importantly, for the benefit of the user.

Green In Future and SASA are organizing this focused conference on Technology and Sustainable Landscape Design. This inaugural conference will provide a unique platform for professionals to discuss the latest challenges and opportunities covering the landscape industry in Singapore and the region, bringing together a broad spectrum of senior level delegates from the region.

The conference will focus on the key areas of Landscape design and use of new technologies like Building Information Modeling (BIM) and 3D printing. The conference will also feature leading landscape professionals in the region to showcase network, learn and identify future business opportunities.

Landscape architects are now exploring new technologies like Virtual Reality Unmanned Aerial Vehicles (drones), 3D printing and fabrication, in-house programming. BIM applications help an energy modeler understand the levels of impact a building or structure might have on a landscape.

Who should attend

- Policy Makers
- Facility Owners
- Landscape Architects
- BIM Managers
- Product Vendors
- Green Building Associations

A great platform for delegates to gain knowledge on cutting edge technologies and latest trends
